

ECE 375 Prelab 4

Lab Time: Friday 2 PM - 3:50 PM

Student Name: Winnie Woo

TA Signature

1 Questions

1. What is the initial value of DDRB?
0x00
2. What is the initial value of PORTB?
0x00
3. Based on the initial values of DDRB and PORTB, what is Port B's default I/O configuration?
Active high
4. What 16-bit address (in hexadecimal) is the stack pointer initialized to?
0x10FF
5. What are the contents of register r0 after it is initialized?
0xFF
6. How many times did the code inside of LOOP end up running? **4**
7. Which instruction would you modify if you wanted to change the number of times that the loop runs?
ldi i, \$04
8. What are the contents of register r1 after it is initialized?
0xAA
9. What are the contents of register r2 after it is initialized?
0x0F
10. What are the contents of register r3 after it is initialized?
0x0F
11. What is the value of the stack pointer when the program execution is inside the FUNCTION subroutine?
0x10FD
12. What is the final result of FUNCTION? (What are the hexadecimal contents of memory locations \$0105:\$0104)?
0e, ba
